General Purpose Series

multicomp PRO

Description:

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

MLCC is made by NP0, X7R and Y5V dielectric material and which provides product with high electrical precision, stability and reliability.

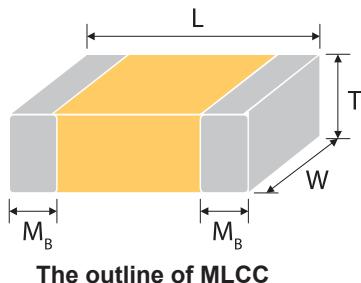

Features:

- A wide selection of sizes is available (0603, 0805, 1206).
- High capacitance in given case size.
- Capacitor with lead-free termination (pure Tin).

Applications:

- For general digital circuit.
- For power supply bypass capacitors.
- For consumer electronics.
- For telecommunication.

Storage and handling conditions

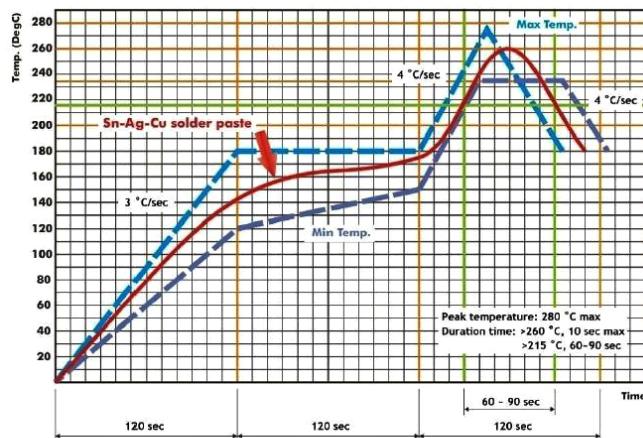

- (1) To store products at 5°C to 40°C ambient temperature and 20 to 70% related humidity conditions.
- (2) The product is recommended to be used within one year after shipment. Check solderability in case of shelf life extension is needed.

Cautions:

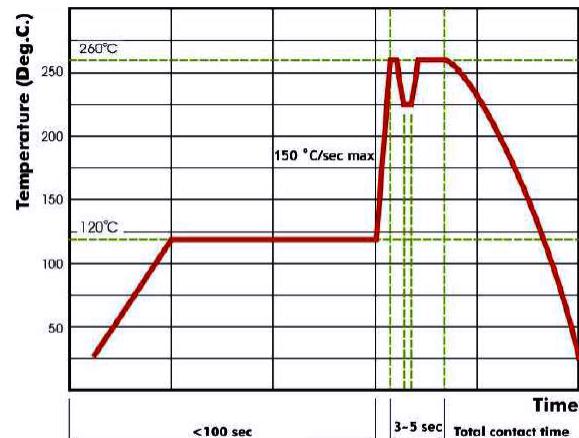

- a. Don't store products in a corrosive environment such as sulfide, chloride gas, or acid. It may cause oxidation of electrode, which easily be resulted in poor soldering.
- b. To store products on the shelf and avoid exposure to moisture.
- c. Don't expose products to excessive shock, vibration, direct sunlight and so on.

Recommended soldering conditions

The lead-free termination MLCCs are not only to be used on SMT against lead-free solder paste, but also suitable against lead-containing solder paste. If the optimized solder joint is requested, increasing soldering time, temperature and concentration of N₂ within oven are recommended.

Recommended IR reflow soldering profile for SMT process with SnAgCu series solder paste.

Recommended wave soldering profile for SMT process with SnAgCu series solder.
