

Lithium-ion Battery	
Model Specifications	
ISR18650-1300	ISR 1300mAh 15c Grade A

Product Specifications:

No.	Items	Specifications	
1	Limited Charge Voltage	4.2 ± 0.05V	
2	Nominal Voltage	3.7V	
3	Rated Capacity	1300mAh	
4	Standard Charging Current	650mA	
	Rapid Charging Current	1300mA	
5	Max. Continuous Charge Current	2.6A	
6	Max. Continuous Discharge Current	13A cycle, 20A continuous, 30A 2s	
7	Discharge Cut-off Voltage	2.75V	
8	Operating Temperature (Cell Surface Temperature)	Charging : 0°C~50°C (Recommended recharge release < 45°C)	
		Discharging: -20°C~80°C (Recommended recharge release < 70°C)	
9	Storage Temperature	1 month: 30°C~60°C, 3 months: 30°C~45°C 1 year: 20°C~25°C	
10	Cell Weight	Approx. 41 gms	
11	AC Impedance	≤20mΩ	
12	Cell Dimension	Height: 65.1 mm ± 0.3 mm Diameter: ≤18.5mm	

Cell Dimension:

Max. 18. 5

Lithium-ion Battery	
Model Specifications	
ISR18650-1300	ISR 1300mAh 15c Grade A

Standard Test Conditions:

Unless otherwise specified, all tests stated in this datasheet are conducted at below conditions: Temp.: 23°C±2°C, Relative Humidity: 65%±20%, Atmospheric Pressure: 86kPa~106kPa

Electrical characteristics:

No.	Items	Test Methods and conditions	Criteria
1	Standard Charging Method	Charging the cell with constant current at 650mA and then with constant voltage at 4.2V till charge current declines to ≤ 26mA	Limited Charge Voltage = 4.2V Charge Current = 650mA
2	Rapid Charging Method	Charging the cell with constant current at 1300mA and then with constant voltage at 4.2V till charge current declines to ≤ 65mA	Limited Charge Voltage = 4.2V Charge Current = 1300mA
3	AC Impedance	Prior to charging, the cell shall be discharged at a constant current to 650mA down to the cutoff discharge voltage 2.75V. The cell should be stored at the temperature of 20°C±5°C from 1h to 4h. Internal resistance is measured at AC 1KHz±0.1KHz.	≤20mΩ
4	Capacity	(1) Prior to charging the cell shall be discharged at a constant current of 260 mA down to cutoff voltage 2.75V, rest for 10 minutes. (2) The capacity means the discharge capacity of the cell, which is measured with discharge current of 260mA to 2.75V cut-off voltage after standard charge and rest step from 0.5h to 1h. The above experiment repeat 3 times, until the discharge capacity meet the requirement for one time, then the test can be stopped.	≥1300mAh
5	High Rate Discharge Performance	 (1) Prior to charging the cell shall be discharged at a constant current of 650 mA down to cutoff voltage 2.75V, rest for 10 minutes. (2) Discharge with the current of 10C, after standard charge and rest from 0.5h to 1h, and record the discharge capacity. 	≥96% Rated Capacity

_	T	T	
6	Cycle Life	Charge: The cell shall be charged in	≥300cycles
		accordance with rapid charge method,	
		rest for 30 minutes.	
		Discharge: 10C discharge to 2.75V,	
		one cycle is finished, then rest for 30	
		minutes. Then repeat above steps,	
		when capacity is less than 80% of	
		rated capacity two times in a row, test	
		is end.	
			4.9
7	Self-discharge	Voltage difference after	10 days ≤ 0.05V
		corresponding days rest at 23±2°C	3 <mark>0 day</mark> s ≤ 0.08V
			90 days ≤ 0.15V
8	Low	(1) Firstly, discharge to 2.75V with the	Discharge Capacity ≥70%
	Temperature	current of 650mA. (2) The cell shall be	Rated Capacity
	Performance	charged in accordance with the	
		standard charging method. (3) The cell	
		shall be stored in the temperature of -	
		-20±2°C from 16h to 24h. (4)	
		Discharge at the constant current of	2
		0.2C down to the cutoff voltage 2.5C	

Cell Safety Tests:

No.	Items	Test Methods & Conditions	Criteria
1	Overcharge Test	Firstly, discharge to 2.75V with the current of 300mA. The charge at constant current of 4C to 10V until the cell explode or fire of the surface temperature of the cell stabled (the changes of temperature less than 10°C during 30 minutes). Once the cell meets one of the three conditions, the test can be stopped	No Fire, No Explosion.
2	Low Pressure Test	The full charged cells are to be stored for at least 6h at a vaccum environment with pressure of less than 11.6kPa, and temperature of 20°C±5°C	No Fire, No Explosion. The open circuit voltage of each test cell or battery after testing is not less than 90% of its voltage immediately prior to this procedure.

		perpendicular mounting positions of	
		the cell. One of the directions of	
		vibration must be perpendicular to the	
		terminal base. The logarithmic	

Lithium-ion Battery	
Model Specifications	
ISR18650-1300 ISR 1300mAh 15c Grade A	

		frequency sweep is as follows: from 7Hz a peak acceleration of 1 gn is maintained until 18 Hz is reached. The amplitude is then at 0.8mm (1.6mm total excursion) and the frequency increased until a peak acceleration of 8 gn occurs (approximately 50 Hz). A peak acceleration of 8 gn is then maintained until the frequency is increased to 200 Hz	
2	Shock Test	The full charged cell is fixed on shock table. Each cell shall be subjected to a half sine shock of peak acceleration of 150 gn and pulse duration of 6 milliseconds. Each cell shall be subjected to three shocks in positive direction followed by three shocks in negative direction of three mutually perpendicular mounting positions of the cell for a total of 18 shocks.	No Fire, No Explosion. The open circuit voltage of each test cell or battery after testing is not less than 90% of its voltage immediately prior to this procedure.
3	Impact Test	After standard charge, the cell is placed on a flat surface. The bar of 15.8mm diameter is placed across the center of the cell. The weight of 9.1 kg is dropped from a height of 610mm onto the cell.	No Fire, No Explosion.
4	Crush Test	A cell is crushed between two flat surfaces. The applied force is 13 kN±1kN by hydrocylinder. Once the maximum pressure has been obtained or voltage decrease to 1/3 of nominal voltage sharply or 10% of deformation has occurred compared to the initial dimension, the force is released.	No Fire, No Explosion.
5	Free Drop Test	The fully charged cell drops on the concrete ground from 1m height, total 3 times, to obtain the shock of random directions. After the test, the cell shall rest for a minimum one hour and then a visual inspection shall be performed.	No Fire, No Explosion.
